

## Low-power dual operational amplifiers

Datasheet - production data

### Features

- Frequency compensation implemented internally
- Large DC voltage gain: 100 dB
- Wide bandwidth (unity gain): 1.1 MHz (temperature compensated)
- Very low supply current per channel essentially independent of supply voltage
- Low input bias current: 20 nA (temperature compensated)
- Low input offset voltage: 2 mV
- Low input offset current: 2 nA
- Input common-mode voltage range includes negative rails
- Differential input voltage range equal to the power supply voltage
- Large output voltage swing  
0 V to  $(V_{CC}^+ - 1.5 \text{ V})$

### Description

These circuits consist of two independent, high-gain, internally frequency-compensated op amps, specifically designed to operate from a single power supply over a wide range of voltages. The low-power supply drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, DC gain blocks and all the conventional op amp circuits, which can now be more easily implemented in single power supply systems. For example, these circuits can be directly supplied with the standard 5 V, which is used in logic systems and will easily provide the required interface electronics with no additional power supply.

In linear mode, the input common-mode voltage range includes ground and the output voltage can also swing to ground, even though operated from only a single power supply voltage.

#### Notes:

<sup>(1)</sup> Short-circuits from the output to  $V_{CC}$  can cause excessive heating if  $V_{CC} > 15$  V. The maximum output current is approximately 40 mA independent of the magnitude of  $V_{CC}$ . Destructive dissipation can result from simultaneous short circuits on all amplifiers.

<sup>(2)</sup> This input current only exists when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistor becoming forward-biased and thereby acting as input diode clamp. In addition to this diode action, there is NPN parasitic action on the IC chip. This transistor action can cause the output voltages of the op amps to go to the  $V_{CC}$  voltage level (or to ground for a large overdrive) for the time during which an input is driven negative. This is not destructive and normal output is restored for input voltages above -0.3 V.

<sup>(3)</sup> Short-circuits can cause excessive heating and destructive dissipation.  $R_{th}$  are typical values.

<sup>(4)</sup> Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.

<sup>(5)</sup> Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.

<sup>(6)</sup> Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

Table 2: Operating conditions

Symbol	Parameter		Value	Unit
$V_{CC}$	Supply voltage		3 to 30	V
$V_{icm}$	Common mode input voltage range <sup>(1)</sup>		$(V_{CC^-}) - 0.3$ to $(V_{CC^+}) - 1.5$	
$T_{oper}$	Operating free air temperature range	LM158	-55 to 125	°C
		LM258	-40 to 105	
		LM358	0 to 70	

**Notes:**

<sup>(1)</sup>When used in comparator, the functionality is guaranteed as long as at least one input remains within the operating common mode voltage range.

Notes:

<sup>(1)</sup>V<sub>o</sub> = 1.4 V, R<sub>s</sub> = 0 Ω, 5 V < V<sub>CC</sub><sup>+</sup> < 30 V, 0 < V<sub>ic</sub> < V<sub>CC</sub><sup>+</sup> - 1.5V

<sup>(2)</sup>The direction of the input current is out of the IC. This current is essentially constant, independent of the state of the output so there is no change in the load on the input lines.

<sup>(3)</sup>The input common-mode voltage of either input signal voltage should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is (V<sub>CC</sub><sup>+</sup>) - 1.5 V, but either or both inputs can go to 32 V without damage.

<sup>(4)</sup>Due to the proximity of external components, ensure that stray capacitance between these external parts does not cause coupling. Typically, this can be detected because this type of capacitance increases at higher frequencies.

## 9 Revision history

**Table 9: Document revision history**

Date	Revision	Changes
01-Jul-2003	1	First release.
02-Jan-2005	2	$R_{thja}$ and $T_j$ parameters added in AMR Table 1: "Absolute maximum ratings".
01-Jul-2005	3	ESD protection inserted in Table 1: "Absolute maximum ratings".
05-Oct-2006	4	Added Figure 17: Phase margin vs. capacitive load.
30-Nov-2006	5	Added missing ordering information.
25-Apr-2007	6	Removed LM158A, LM258A and LM358A from document title. Corrected error in MiniSO-8 package data. L1 is 0.004 inch. Added automotive grade order codes in Section 7: "Ordering information".
12-Feb-2008	7	Corrected $V_{CC}$ max (30 V instead of 32 V) in operating conditions. Changed presentation of electrical characteristics table. Deleted $V_{opp}$ parameter in electrical characteristics table. Corrected miniSO-8 package information. Corrected temperature range for automotive grade order codes. Updated automotive grade footnotes in order codes table.
26-Aug-2008	8	Added limitations on input current in Table 1: "Absolute maximum ratings". Corrected title for Figure 11. Added E and L1 parameters in Table 4: "SO8 package mechanical data". Changed Figure 31: "TSSOP8 package mechanical drawing".
02-Sep-2011	9	In Section 6: "Package information", added: <ul style="list-style-type: none"> <li>• DFN8 2 x 2 mm package mechanical drawing</li> <li>• DFN8 2 x 2 mm recommended footprint</li> <li>• DFN8 2 x 2 mm order codes.</li> </ul>
06-Apr-2012	10	Removed order codes LM158YD, LM258AYD, LM258YD and LM358YD from Table 8: "Order codes".
11-Jun-2013	11	Table 8: "Order codes": removed order codes LM158D, LM158YDT, LM258YDT, and LM258AD; added automotive grade qualification to order codes LM258ATDT and LM358YDT; updated marking for order codes LM158DT and LM258D/LM258DT; updated temperature range, packages, and packaging for several order codes.
20-Jun-2014	12	Removed DIP8 package Corrected typos (W replaced with $\Omega$ , £ replaced with $\leq$ ) Updated Features Added Related products Table 3: replaced $DV_{io}$ with $\Delta V_{io}/\Delta T$ and $DI_{io}$ with $\Delta I_{io}/\Delta T$ . Updated Table 7 for exposed pad dimensions Table 8: "Order codes": removed order codes LM258YPT and LM258AYPT; removed all order codes for devices with tube packing; added package code (NB) to DFN8 2x2 package.

Date	Revision	Changes
13-Nov-2015	13	<p>Updated document layout</p> <p>Updated name of the "DFN8 2x2 (NB) mm" package to "DFN8 2x2" everywhere in datasheet.</p> <p><i>Section 2: "Package pin connections"</i>: placed the package's pinout in this section and added note about exposed pad.</p> <p><i>Table 8: "Order codes"</i>: removed order codes LM258ST, LM358YPT, and LM358AYPT.</p>
